Italian citizenship (EU national) – no work permit required | Open to relocating to Berlin, available at short notice

PROFILE

Full-Stack Developer with four years of professional experience building production web applications with React, Next.js, TypeScript, Python (FastAPI) and Java (Spring Boot). Focus on designing and integrating REST APIs, relational databases (PostgreSQL) and containerised deployments with Docker. Additional hands-on experience in AI applications (LLMs, RAG pipelines with LangChain, AWS Bedrock). Used to working in international, agile teams (Scrum, Git, code reviews); B.Sc. in Computer Science including an exchange year in France.

PROFESSIONAL EXPERIENCE

AI Developer (Agentic AI) | Prime Up, Rio de Janeiro (remote) 10/2025 – 06/2026

- Built agent-based AI systems for the client BNY: designed **RAG pipelines with LangChain** and integrated the **AWS Bedrock APIs** for response generation.
- Implemented an internal conversational agent with IBM Watson that selects and invokes the appropriate tools per request, filtering retrieved document chunks according to user permissions.
- Backend development in **Python**, frontends with **React**, deployment with **Docker** and integration of IBM Cloud services.

Full-Stack Developer | Anouk Partners, Rio de Janeiro (contract) 07/2025 – 10/2025

- Contributed to a dockerised full-stack application with a **Next.js frontend**, a **Java Spring backend**, external APIs and a relational database.
- Developed frontend components together with senior engineers, following agile methods and Git best practices.

AI Developer | Euranova, Marseille, France 08/2024 – 02/2025

- Established a structured methodology to improve efficiency across all stages of the AI development lifecycle.
- Applied the methodology to a **LangChain-based RAG project** (Qdrant vector store), focusing on reducing computational resource consumption.

Machine Learning Intern | LIS-Lab (Team TALEP), Marseille, France 02/2024 – 05/2024

- Processed MP3 audio datasets with a pretrained HuBERT model: speech recognition and extraction of MFCC features; researched Large Language Models and Transformer architectures for audio processing.

Systems Analyst | VTEX, Rio de Janeiro, Brazil 08/2022 – 08/2023

- Developed a **Python** automation tool (Selenium, OpenPyXL) that automatically updated the company's procurement database.
- Supported SOx audit controls in the procurement department in collaboration with KPMG.

PROJECTS

Nemesis – audit software for public spending (with CEFET/RJ) 2025 – 2026

1st place at the Brazilian national innovation contest INOVA (Painel Telebrasil) among 44 projects. Full-stack application for the public spending audit authority of the state of Rio de Janeiro: direct and semantic database queries, 3D projection of spending records via a denoising autoencoder, graph-based detection of split payments, and overpricing analysis through vector search (pgvector). Stack: React, FastAPI, PostgreSQL, SQLAlchemy, PyTorch.

Fiscalizando – transparency portal for citizens

Web application covering voting records and legislative proposals of state deputies, with a feature to compare the voting alignment of two representatives and advanced search; automated daily data updates via FastAPI into PostgreSQL; deployed with Docker and Nginx. Stack: React, FastAPI, PostgreSQL, Docker, Nginx.

TasteBuddy – web app for restaurant reviews

Responsive UI with Angular and Tailwind CSS, database schema plus authentication and authorisation via Supabase, deployed on Vercel: tastebuddy-blush.vercel.app

EDUCATION

B.Sc. Computer Science CEFET/RJ (federal university), Rio de Janeiro, Brazil	2019 – 2025
Final grade 8.04/10 – equivalent to the German grade 2.1 (good). Bachelor's thesis "Auditing Public Spending – a Natural Language Processing Approach" (top grade 20/20): deep embedded clustering model categorising 1.4 million invoice records.	
Master 1 Computer Science (exchange year) Aix-Marseille Université, France	2023 – 2024

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, Python, Java, SQL, C++, HTML5, CSS3
Frontend:	React, Next.js, Angular, Tailwind CSS, responsive UI design, REST API integration
Backend:	FastAPI, Java Spring Boot, REST APIs, SQLAlchemy, authentication & authorisation
Databases:	PostgreSQL, pgvector, Supabase, Qdrant (vector database)
DevOps & Cloud:	Docker, Nginx, Git/GitHub, Vercel, AWS (Bedrock), IBM Cloud
AI & Data:	LLMs, RAG, LangChain, PyTorch, NLP, clustering, IBM Watson
Ways of working:	Agile/Scrum, code reviews, Git workflows, pair programming with senior engineers

LANGUAGES

Portuguese (native) | English C2 | French C1 | Italian B2 | German A2 (course ongoing)

ADDITIONAL

YouTube channel with deep learning tutorials: MLP and LSTM from scratch with NumPy, deep embedded clustering with PyTorch (@viniciusparaizo3193) | Tutor for data structures in C++ (2021 – 2022)
